Care and maintenance

Wood furniture

Wood displays different grain patterns depending on which way they are cut - for example, the 'medullary ray' which can appear on oak furniture is a mark of good quality timber - these are just characteristics of natural beauty of the wood. Some furniture is also deliberately aged and rustic, wood veneers also allow a distinctive pattern to be created on some surface, such as tabletops and drawer fronts by the way slivers are arranged.

How to care for your wood furniture

Furniture with a hard lacquer, wax polish or painted surface should be dusted with a dry cloth. Waxed furniture will need to be given a coat of beeswax a couple of times a year to help maintain its lustre.

Spray polishes are best avoided as they contain silicones which may spoil the furniture's surface when building up over time.

Make sure all surfaces are protected from the heat and liquids by mats and coasters. Wipe up spills immediately and ensure that a mat or pad is placed under paper if you are writing.

Our furniture will endure most temperatures in the home, but it is best to avoid placing furniture next to heat sources such as radiators or fires. Be particularly careful with solid wood as the lack of humidity caused by home heating can cause damage such as warping.

Caution

This wood has a painted surface that can scratch. Please avoid contact with hard, sharp objects, Avoid placing plant pots or vases without waterproof mats to prolong the life of the product.

Please do not sit or lean on this product.

Maximum Load Capacity: 104 lbs for the top surface, 44 lbs for the central shelf, 27 lbs for each shelf and 9 lbs for the drawer.

Retain these instructions for furniture reference.

Your feedback is very important to us and we would love to hear your comments on your new furniture. Please visit our website to leave a review. Thank you.
